

❖ Console Input/Output

1. What is Console

- A **Console** is a screen or terminal where we **enter input** and **see the output** of a program.

2. What is Output

- Output is the information displayed by the program to the user.

```
print("Welcome to Python")
```

- o/p - Welcome to Python
- print() Function :
- The print() function is used to display output on the console.

3. What is Input

- Input is the information entered by the user into the program.
- input() Function :
- the input() function is used to accept input from the user.

```
variable = input("Message")
```

4. Type Conversion

- Since input always returns string, we need to convert it.

```
age = int(input("Age : "))  
price = float(input("Price : "))
```

5. Formatting Output

- Formatting means displaying output in a clean and professional way.

```
name="DemoUser"  
age=22  
  
print("Name :",name)  
print("Age :",age)
```
